EDUCATION

Hunter College, New York, NY

May 2028

Bachelor of Arts, Major: Computer Science, Minor: Math and Statistics

Wesleyan University, Middletown, CT

May 2023

Bachelor of Arts, Major: Neuroscience and Behavior, Minor: Chemistry and Film, Extensive Coursework in Data Analytics

PROJECTS

Kubeflow (CNCF Open-Source ML Platform), *Org Member & Contributor*

January 2026 – Present

- Shipped merged PRs migrating Python clients off deprecated APIs to v1 per KEP-0004 across kubeflow/hub and kubeflow/sdk, regenerating OpenAPI clients and validating 270+ unit/E2E tests with pytest, mypy, ruff
- Designed and shipped a decoupled upload_artifact utility (Python, Pydantic) supporting S3 and OCI object storage, isolating artifact uploads from registry logic per a community feature request
- Building a Go client and backend proxy layer routing UI traffic to v1 Model Registry, Model Catalog, and MCP Catalog APIs; co-authored the SDK 0.4.0 release blog post and became a Kubeflow org member on the strength of sustained contributions

EXPERIENCE

DAIR Lab, *Research Assistant*, New York, NY

August 2025 – Present

- Validated and scaled a multimodal Graph Neural Network pipeline (PyTorch, PyTorch Geometric GAT/GCN encoders, ESM protein embeddings) for toxin ion-channel classification; debugged a label-mapping defect silently corrupting class-level statistics and extended a persistent-homology analysis (GUDHI) from a 3-sample proof-of-concept to a validated 200-protein benchmark, achieving 87.5% test accuracy
- Implementing a custom Gradient Reversal Layer (PyTorch autograd.Function) for domain-adversarial training to close the ~30-point generalization gap between random-split (~86%) and held-out-taxon (~55%) accuracy

EN-POWER GROUP, *Energy Data Manager I | Energy Data Intern*, New York, NY

June 2025 – Present

- Developed and deployed statistical models to predict building emissions trajectories across 200+ building portfolios, delivering interpretable, actionable LL97 compliance recommendations that drove business value for 50+ clients.
- Engineered large-scale data pipelines to scrape, transform, and aggregate multi-source energy datasets, building client-facing Power BI dashboards and supporting LL97 compliance filings and payment processing for 900+ properties in coordination with DOB systems.
- Automated client communications, document workflows, and file management across 1,000+ clients using Python-based tools, reducing manual processing time by more than 50%.

Aarohaa.AI, *Data Science Intern*, New York, NY

May 2025 – June 2025

- Designed and deployed a JSON parsing agent to normalize LLM outputs across multiple data formats, ensuring consistent inter-agent communication and scalable multi-agent orchestration using RAG and agentic AI pipelines.
- Implemented FastAPI endpoints to integrate AI agents with live dashboards, enabling real-time data processing, decision support, and system transparency in production environments.
- Extracted, transformed, and validated backend SQL datasets by engineering new data columns and persistence logic to ensure accurate, reliable data storage across agent operations.

DRUM: Desis Rising Up and Moving, *Campaign Strategist and Data Lead*, Bronx, NY

November 2023 – January 2026

- Designed and analyzed 100+ community surveys and maintained a 500+ person membership database, translating multi-source data (social media, news, policy) into visualizations and clear reports that guided resource allocation for non-technical stakeholders and decision-makers.

General Assembly, *Data Science Immersive Bootcamp fellow*, New York, NY

September 2023 – December 2023

- Completed **500+ hours** of training in statistical modeling, machine learning algorithms, and advanced mathematics, with applications in fintech & AI using Python and SQL.
- Built and deployed ML models for regression, classification, NLP, LLMs, and anomaly detection, developing domain-specific analytical content integrated into Streamlit dashboards to drive business value.
- Executed projects on financial risk prediction, market trend forecasting, and portfolio optimization modeling, applying feature engineering and validation techniques for high accuracy.

TECHNICAL SKILLS & CERTIFICATION

AI & Machine Learning: Generative AI (LLMs, Agentic Frameworks, MCP, API Integration), Claude Code, Google AI Studio, Graph Neural Networks (PyTorch Geometric), Statistical Modeling, NLP, Neural Networks, Predictive Modeling, Feature Engineering

Data Engineering & Visualization: Web Scraping, ETL Pipelines, Tableau, Matplotlib, Seaborn, Plotly, Power BI

Languages: Python, C++, SQL, HTML, CSS **Frameworks:** LangChain, TensorFlow, PyTorch, Scikit-learn, PySpark, Streamlit

DevOps & Productivity: Git, GitHub, Supabase, Vercel, Docker, Jira, Power Automate, Microsoft Office Suite, Google Workspace

Certifications: Hugging Face AI Agents, McKinsey Forward Program
